Description of the building

One World Trade Center is the biggest construction in the USA. This achievement of architecture has 105 floors, and its total height is 1776 feet (541 meters) which symbolically mark the date of the declaration of the United States' Declaration of Independence. It was built on the site of the WTC that was destroyed by terrorists on September 11, 2001. During the preparations for its construction, found of the 18th century hull were rubbed. Why I chose this building? Because for me, this is a symbol of not giving up in hard moments and overcoming various difficulties. Its is the biggest construction in the USA. This is one of the reasons for which I chose this piece of architecture. However, the main trigger which made me chose it is its exterior and history. I dream to fly to New York to see One World Trade Center which is undoubtedly one of the most beautiful buildings in the USA and which stands out from the rest constructions in NYC.

Mock-up dimensions

- scale: 1:250
- height of the building without the spire: 5,418ft (ok 1,65 meters)
- with spire: 7,1 ft (ok 2,15 meters)
- width: 0,85 ft (ok 0,26 meter)
- mass: 26,5 lbs (12 kilograms)
